What I Believe

- Community Pharmacists are knowledgeable, adaptable, and able to expand their scope of practice to deliver better patient outcomes.
- Consistent and practical standards of practice guide pharmacy practice today and tomorrow.
- Building constructive and collaborative relationships with other health organizations, UBC, government, and the public creates win-win scenarios.

About Derek

What I would like our College to accomplish

- **Expand** a Community Pharmacist's scope of practice to include Advanced Prescribing
- **Support** Advanced Prescribing by engaging government to establish an Electronic Medical Record System (to show diagnoses) for Pharmacists. Make Lab Values accessible by Community Pharmacists
- **Update** legislation to reflect current practice especially regarding technology advances, such as permitting electronic signature and documentation. This includes a legislative framework that is enabling vs prescriptive.
- **Assure** the co-existence of Community Pharmacists with B.Sc and PharmD
- **Empower** the Practice Review Program to allow for a practical approach while still achieving the goals and objectives of our College
- **Foster** a culture that is quick and responsive to front line Pharmacist enquiries

Why pick me?

I share a belief that Pharmacists are health professionals who have earned trust from the communities they serve, the 3rd party payers they work with, and the government that empowers their scope of practice. With 25 years of experience, and currently a Regional Pharmacy Manager, I want to apply my skill set to listen to you, build collaborative relationships, Influence decisions, expand the scope of practice, achieve better patient outcomes, and give you another reason to be proud as a Community Pharmacist.
